Dr Roald Hoffmann
Nobel Laureate in Chemistry &
Professor, Cornell University

Monday March 20
Edmonton City Hall
for a free public lecture

*Chemistry's Essential Tension:
The Same and Not the Same*

In this generously illustrated lecture several views of chemistry will be presented. First, chemistry is, as it has always been, the art, craft, business of substances and their transformations. It is now also the science of molecules, both simple and complex. One must also look at people's perception of chemistry, in terms of its benefits, but also in terms of its risks. This deeply democratizing science is full of tensions, which will be explored in this lecture. As will the strong element of creation or synthesis in chemistry, which brings chemistry close to the arts.

7:30 pm - Reception
8:00 pm - Lecture
Refreshments to follow

Other public events with Dr Hoffmann:

Poetry Reading
Tuesday March 21 - 8:00 PM
Knoppers Hall,
The King's University College, 9125 - 50th St
Light Refreshments
RSVP: Lucio Gelmini, GelminiL@macewan.ca
